

Autoantibodies in cardiovascular diseases

home

Dressler's syndrome, post myocardial infarction syndrome

Cardiac rhythm disease

Hypertonia maligna

Cardimyopathies

Myocarditis

Chagas' myocarditis

Risk of myocardial infarction

Congenital heartblock

Preeclampsia

Literature

- Diagnostic marker with pathogenetic significance
- Diagnostic marker for indicated disease
- Colored circles indicate markers for primary screening
- Indicative autoantibody
- Occasionally associated autoantibodies with marker function for other diseases
- Autoantibodies, which may be found randomly associated but without disease specificity and without any diagnostic significance for the disease mentioned.
- ▶ Cited **Literature** is marked with red numbers and linked with the authors given at the end of the document. By clicking the hand symbol (☞) one returns to the top of the table.
- ▶ **Autoantibodies** cited in the following tables are linked with their respective descriptions.
- ▶ The indicated values of **sensitivity** and **specificity** crucially depend on the respective test methods, on genetic and ethno-geographical variables and on the selection of tested patient and control populations, which is reflected by the considerable variations of the indicated data. Therefore the given figures may be regarded as an approximate guide for the selection of adequate tests for a given clinical situation. For this reason also qualitative estimates such as "low", "medium" or "high" were used.

Autoantibodies in cardiovascular diseases

Dressler's syndrome, post myocardial infarction syndrome

Autoantibodies	Sens [%]	Spec [%]	Disease associations
● Heart muscle-IIIFT			

Table in progress

Index of diseases

Abbreviations

Autoantibodies in cardiovascular diseases

Abbreviations

Sens	Sensitivity
Spec	Specificity
IIFT	Indirect immunofluorescence test
