

Anti-Potassium channel Kv4.2 autoantibodies

Characterized are autoantibodies against DPPX (dipeptidyl-peptidas-like-protein-6) the auxiliary subunit of Kv4.2 channels.

Autoantibodies against the pore forming 70,54 kDa protein (voltage-gated potassium channel subfamily D member 2, voltage gated potassium channel subunit Kv4.2; Q9NZV8, gene *KCND2*, chromosome 7q31) have not been described until now.
